

Biznar.com

Deep Web Research For Business Professionals

Accelerate Business Research

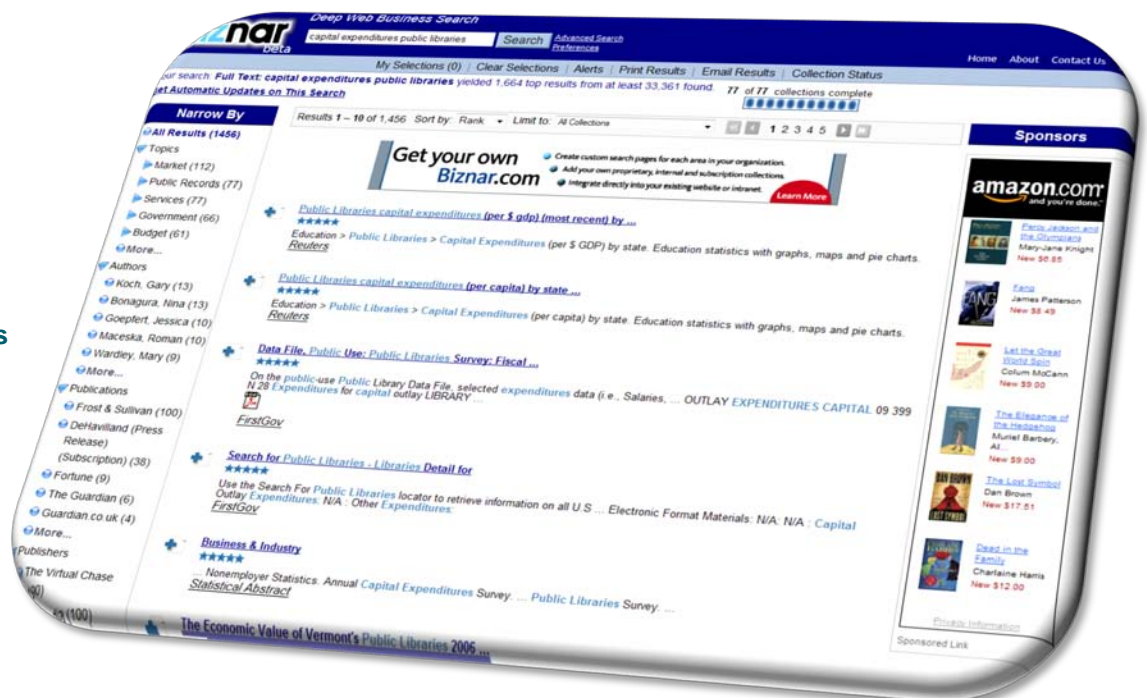

Biznar, a free, publicly available business research site, developed by Deep Web Technologies is not "just another business search site." Using state-of-the-art federated search technology, Biznar accelerates your research by returning the most relevant results from across the World Wide Web including blogs, wikis, news sites, search engines and deep web sources to one, easily navigable page. Each search is done in real-time, searching the sources you select as if you were entering the search term on each individual website yourself. Duplicate results are removed and the results are weighed for relevance (how many times have you searched for something and received completely irrelevant results?) and then ranked according to how closely it matches your search word or phrase. Clicking on any of the results will take you directly to the native website where you can view your information directly.

Biznar is Better

You might be thinking "Why should I search with Biznar instead of one of my other favorite business research sites?" Simply put, Biznar is better. Along with advanced federated search technology, an automatic alert notification system, and a simple interface to search over 70 credible business sources simultaneously, Biznar returns the most relevant results to your query from collections you might not have seen from other popular search engines. Other search engines might be lacking the ability to refine your search results, but Biznar empowers researchers to filter and sort results, drill down into clusters, and select valuable results for email or download into a citation manager. What other search engines allow you to do all of that?

Biznar Benefits

- ✓ Advanced search filters
- ✓ Automatic alerts
- ✓ Intuitive navigation tools
- ✓ Downloadable results
- ✓ Search Individual Collections
- ✓ Five star ranking system
- ✓ Source result summaries
- ✓ Full-text icons when available

Biznar is a free, public facing federated search application by Deep Web Technologies.
