Unlimited Collections
Available At Your Request

The Power of Many – At Your Fingertips

Most professionals rely on a number of different collections of information to help with their research. They seem to want the impossible: speed, accuracy and depth, without “noise.” Deep Web Technologies makes the impossible possible: All the important collections at your fingertips, without the noise.

Our “next-generation” federated search technology can tie all your internal collections together, and whatever external collections – wherever they may be – together under one search. Whether subscription-based, proprietary, internal, public or otherwise, we can include it in your federated search.

Protect Your Investment – New Collections Added at Your Request

Do you subscribe to an esoteric collection? Do you have important internal collections you want included in your federated search? Do you have collections other search companies refuse to include? **No problem – we happily, quickly and cost-effectively build new connectors when you need them!** Deep Web Technologies helps protect your investment in federated search, by using advanced technology to ensure we can federate almost any collection available over the Internet.

Mix and Match your Collections with Search Builder

Specialized departments within your organizations may only need a handful of collections. Deep Web Technologies’ Search Builder tool lets you pick and choose from your collections to build the perfect federated search portal for each department.
